

IPERIONX

A U.S. Critical Materials Company

July 2022

Disclaimer

Forward Looking Statements

Information included in these materials constitutes forward-looking statements. Often, but not always, forward looking statements can generally be identified by the use of forward-looking words such as “may”, “will”, “expect”, “intend”, “plan”, “estimate”, “anticipate”, “continue”, and “guidance”, or other similar words and may include, without limitation, statements regarding plans, strategies and objectives of management, anticipated production or construction commencement dates and expected costs or production outputs.

Forward looking statements inherently involve known and unknown risks, uncertainties and other factors that may cause the Company’s actual results, performance, and achievements to differ materially from any future results, performance or achievements. Relevant factors may include, but are not limited to, changes in commodity prices, foreign exchange fluctuations and general economic conditions, increased costs and demand for production inputs, the speculative nature of exploration and project development, including the risks of obtaining necessary licenses and permits and diminishing quantities or grades of reserves, political and social risks, changes to the regulatory framework within which the company operates or may in the future operate, environmental conditions including extreme weather conditions, recruitment and retention of personnel, industrial relations issues and litigation, as well as other uncertainties and risks set out in filings made by the Company from time to time with the Australian Securities Exchange and the U.S. Securities and Exchange Commission (“SEC”).

Forward looking statements are based on the Company’s and its management’s assumptions relating to the financial, market, regulatory and other relevant environments that will exist and affect the Company’s business and operations in the future. The Company does not give any assurance that the assumptions on which forward looking statements are based will prove to be correct, or that the Company’s business or operations will not be affected in any material manner by these or other factors not foreseen or foreseeable by the Company or management or beyond the Company’s control.

There may be other factors that could cause actual results, performance, achievements or events not to be as anticipated, estimated or intended, and many events are beyond the reasonable control of the Company. Accordingly, readers are cautioned not to place undue reliance on forward looking statements. Forward looking statements in these materials speak only at the date of issue. Except as required by applicable law or stock exchange listing rules, the Company does not undertake any obligation to publicly update or revise any of the forward-looking statements or to advise of any change in events, conditions or circumstances on which any such statement is based.

Cautionary Statements and Important Information

This presentation has been prepared by the Company as a summary only and does not contain all information about assets and liabilities, financial position and performance, profits and losses, prospects, and the rights and liabilities attaching to securities. Any investment in the Company should be considered speculative and there is no guarantee that they will make a return on capital invested, that dividends would be paid, or that there will be an increase in the value of the investment in the future.

The Company does not purport to give financial or investment advice. No account has been taken of the objectives, financial situation or needs of any recipient of this presentation. Recipients of this presentation should carefully consider whether the securities issued by the Company are an appropriate investment for them in light of their personal circumstances, including their financial and taxation position.

Competent Persons Statements

The information in this document that relates to Exploration Results, Mineral Resources, Production Targets, Process Design, Mine Design, Cost Estimates, and Financial Analysis is extracted from IperionX’s ASX Announcement dated June 30, 2022 (“Original ASX Announcement”) which is available to view at IperionX’s website at www.IperionX.com.

The Company confirms that a) it is not aware of any new information or data that materially affects the information included in the Original ASX Announcement; b) all material assumptions and technical parameters underpinning the Production Target, and related forecast financial information derived from the Production Target included in the Original ASX Announcement continue to apply and have not materially changed; and c) the form and context in which the relevant Competent Persons’ findings are presented in this report have not been materially changed from the Original ASX Announcement.

Critical metals and their mineral feedstocks are key to U.S. advanced industries

Electric Vehicles

Titanium metal is extensively used in U.S. defense applications

Higher strength to weight than steel & aluminum

Lighter than steel (~45% lighter)

Superior corrosion resistance / longevity

High temperature applications

Current Defense Applications

U.S. Airforce

U.S. Army

U.S. Navy

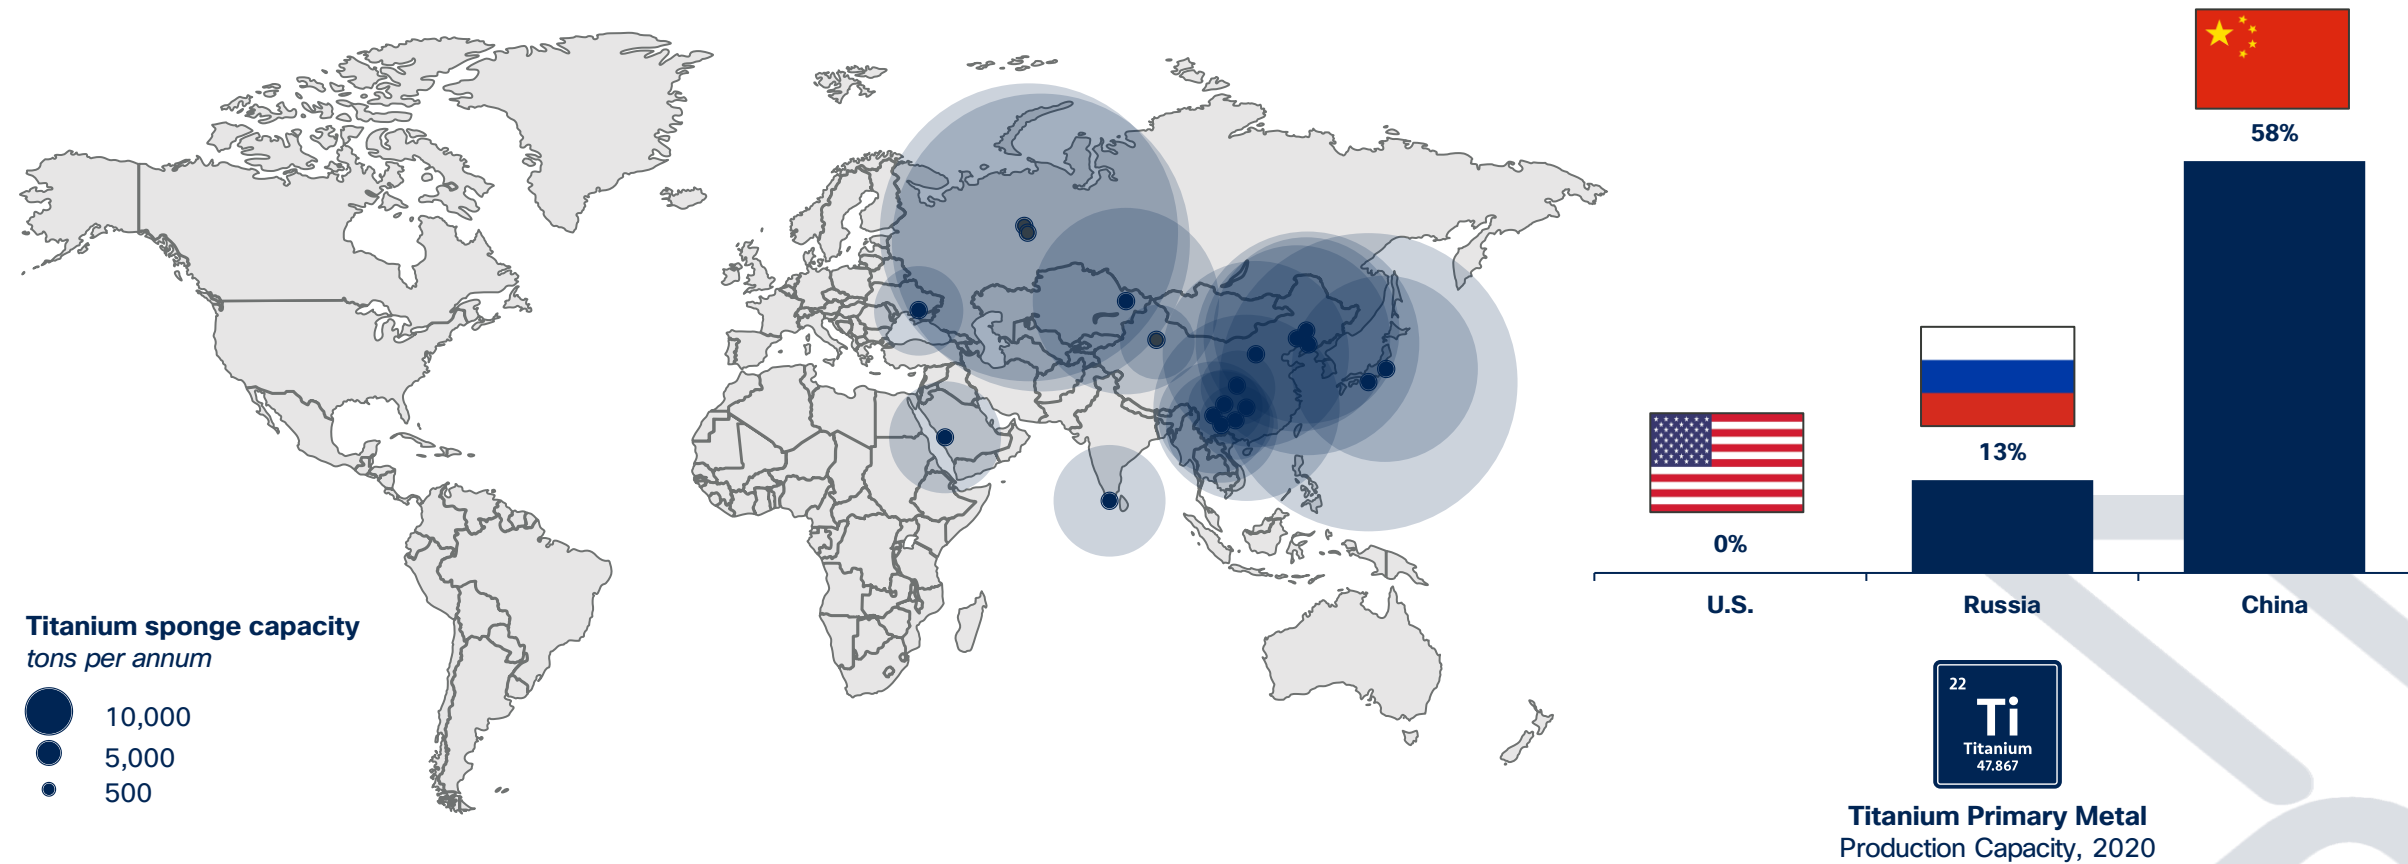

Future Defense Applications

Hypersonics

But the U.S. titanium metal sector is 100% import reliant

We have the solution

IPERIONX

PERIONX

Mineral Operations

Our Titan Project is the large scale, simple & sustainable answer to U.S. critical mineral supply chains

100% owned by IperionX, our Titan Project covers 11,000+ acres of titanium & rare earth rich heavy mineral sands in west Tennessee

- Infrastructure rich location in the heartland of the U.S.
- The largest U.S. titanium and monazite / xenotime JORC code compliant resource
- Simple, low-cost extraction & processing operations
- Sustainable operations with active reclamation

Titan Project Scoping Study Outcomes

June 2022

US\$117 million

Average EBITDA¹

US\$692 million

NPV_{8%}¹

40%

After-tax IRR¹

25 years

Initial life of operations

Potential economics demonstrate one of the highest NPV-to-CAPEX ratios of advanced U.S. critical mineral development projects

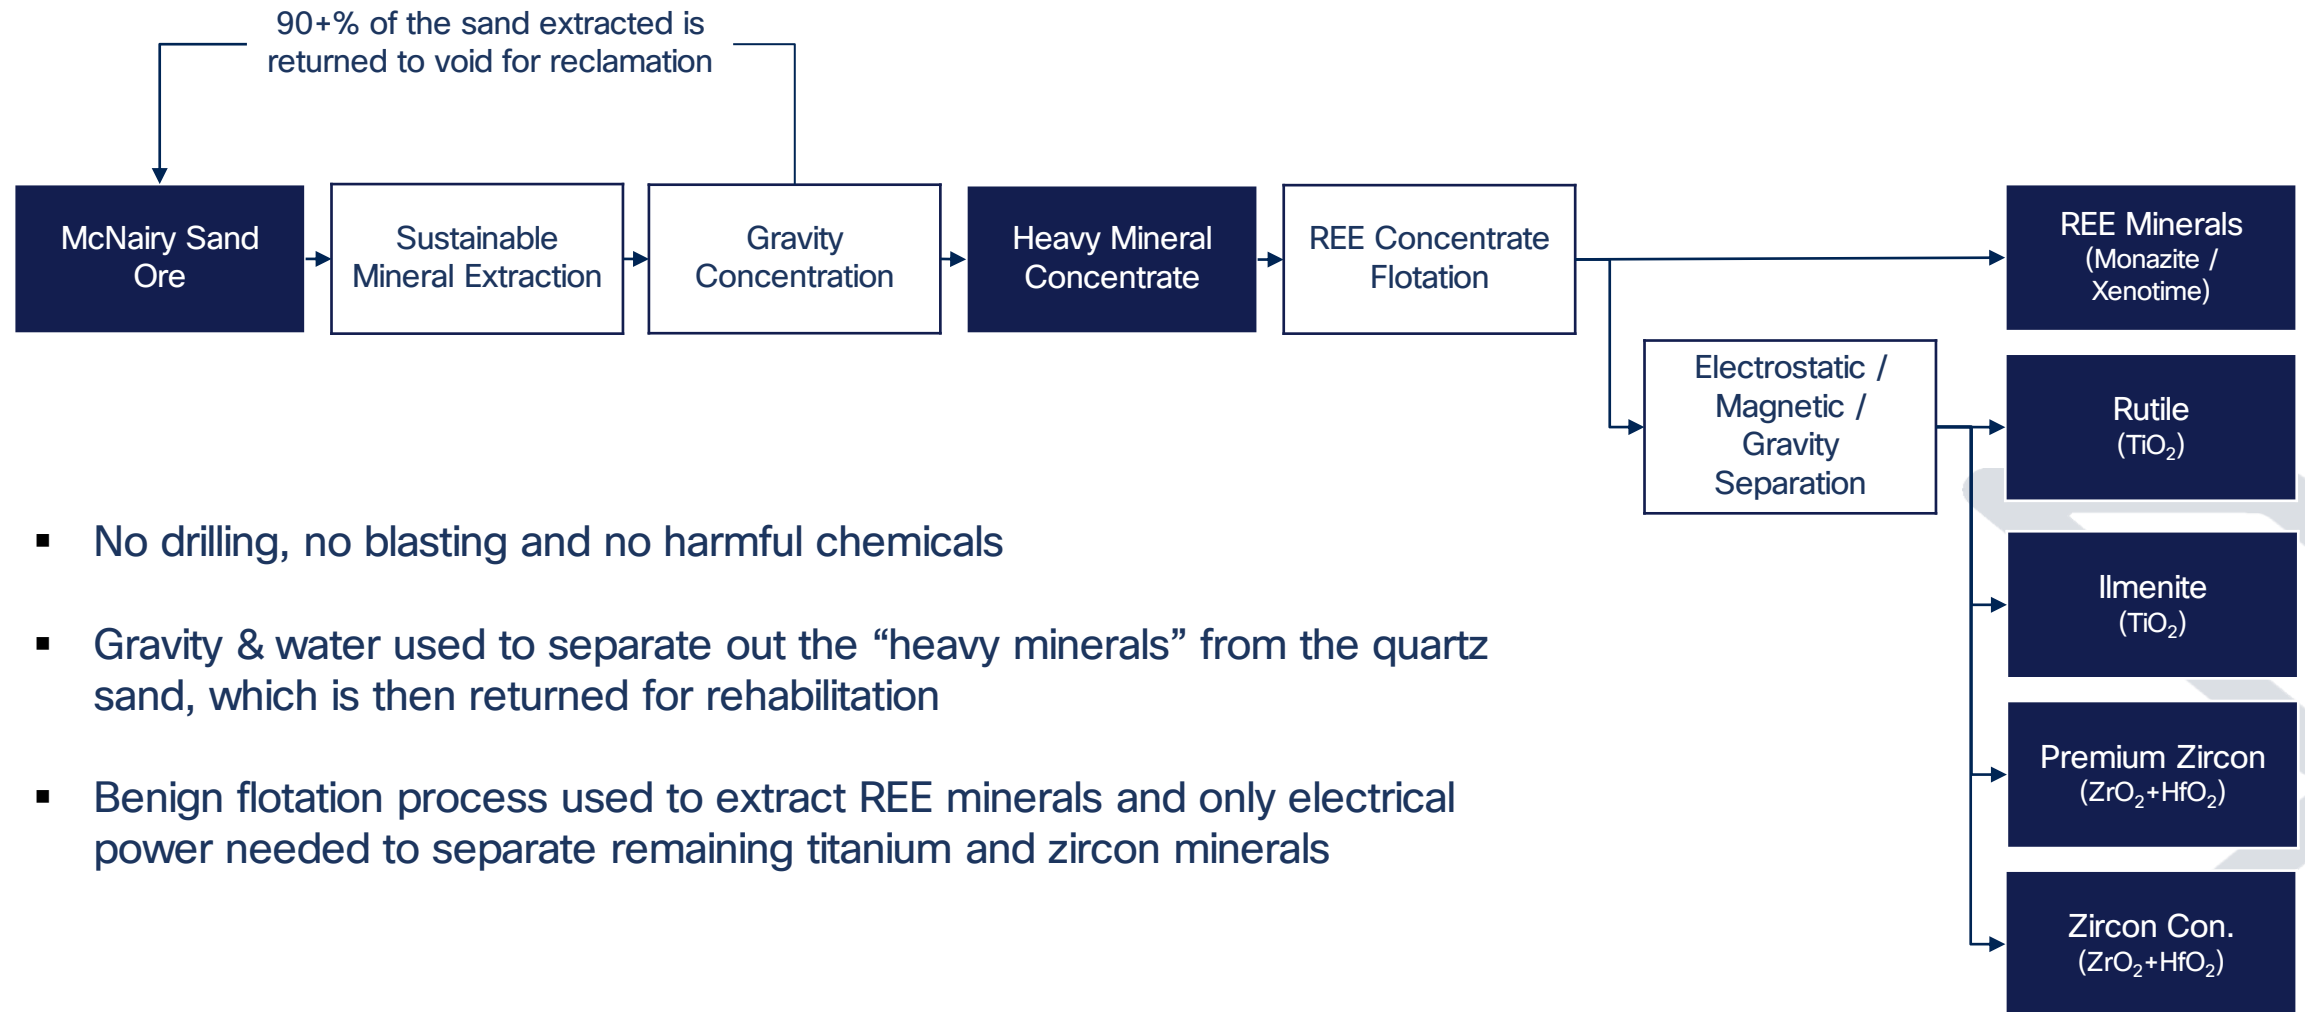

1. June 2022 Scoping Study projections are based on Q1-2022 price projections and cost estimates in U.S. Dollars. Evaluation was carried out on a 100% equity basis using an 8% discount rate. For further information, see Scoping Study press release dated June 30, 2022.

2. NPV to CAPEX ratio calculated as published NPV divided by published development CAPEX, and is unadjusted for inflation or different assumptions contained within each company's respective technical documents.

Simple and conventional extraction and processing

A potential major U.S. source of titanium and rare earths

Over its initial 25-year mine life, the Titan Project is projected to produce:

Contained Rare Earths Oxides to support

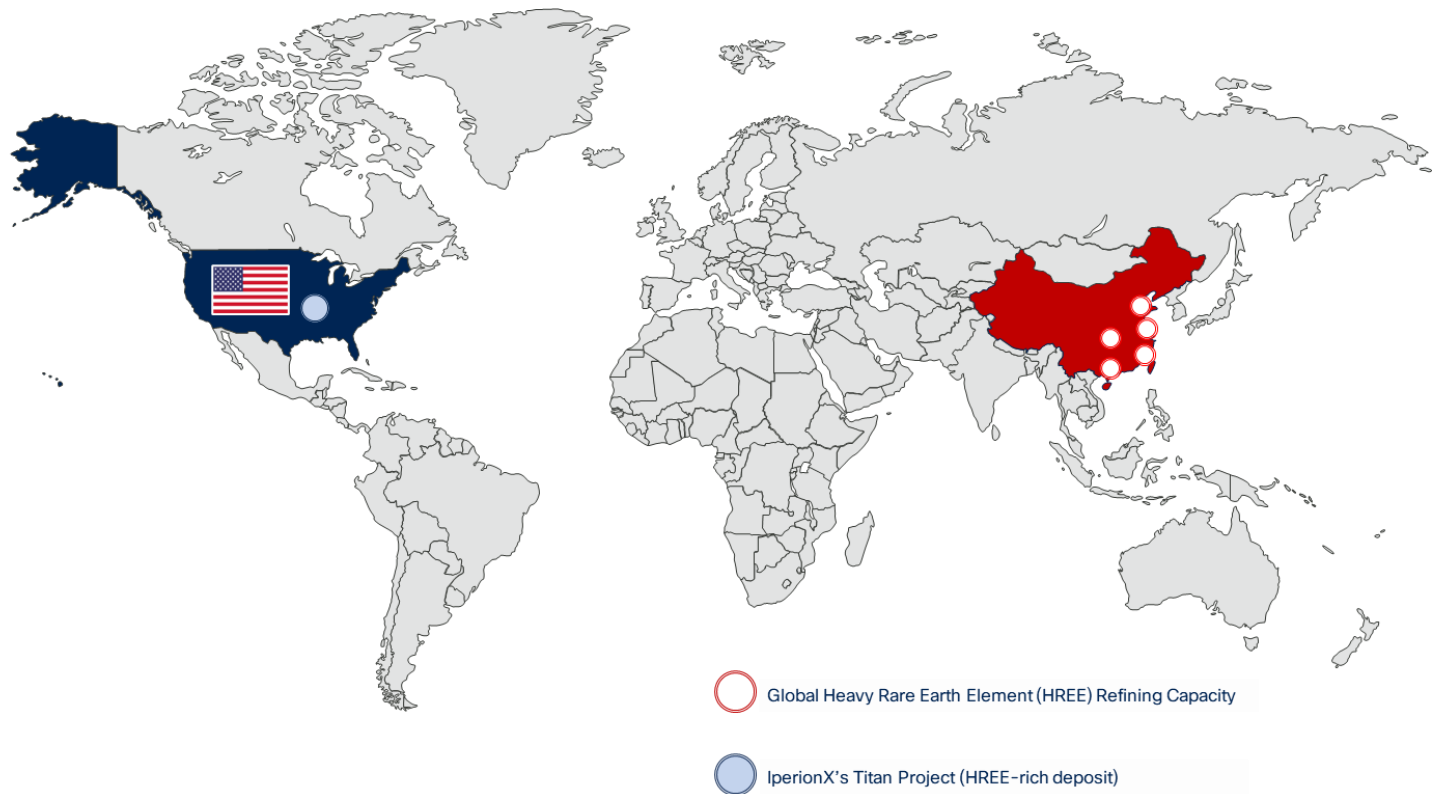

Contained Titanium minerals to support

Source: Adamas Intelligence, Boeing, Titan Project Scoping Study.
Estimates are based on the in-situ Titanium metal and Neodymium metal contained in of the Titan Project's cumulative total mineral concentrate production over 25 years of projected mine life, as outlined in the Titan Project Scoping Study. Assumes 1.3kg of NdFeB magnet per electric vehicle and 31wt% Nd content per kg NdFeB magnet. Assumes Boeing 787 contains 15wt% Titanium, or approximately 18 metric tons.

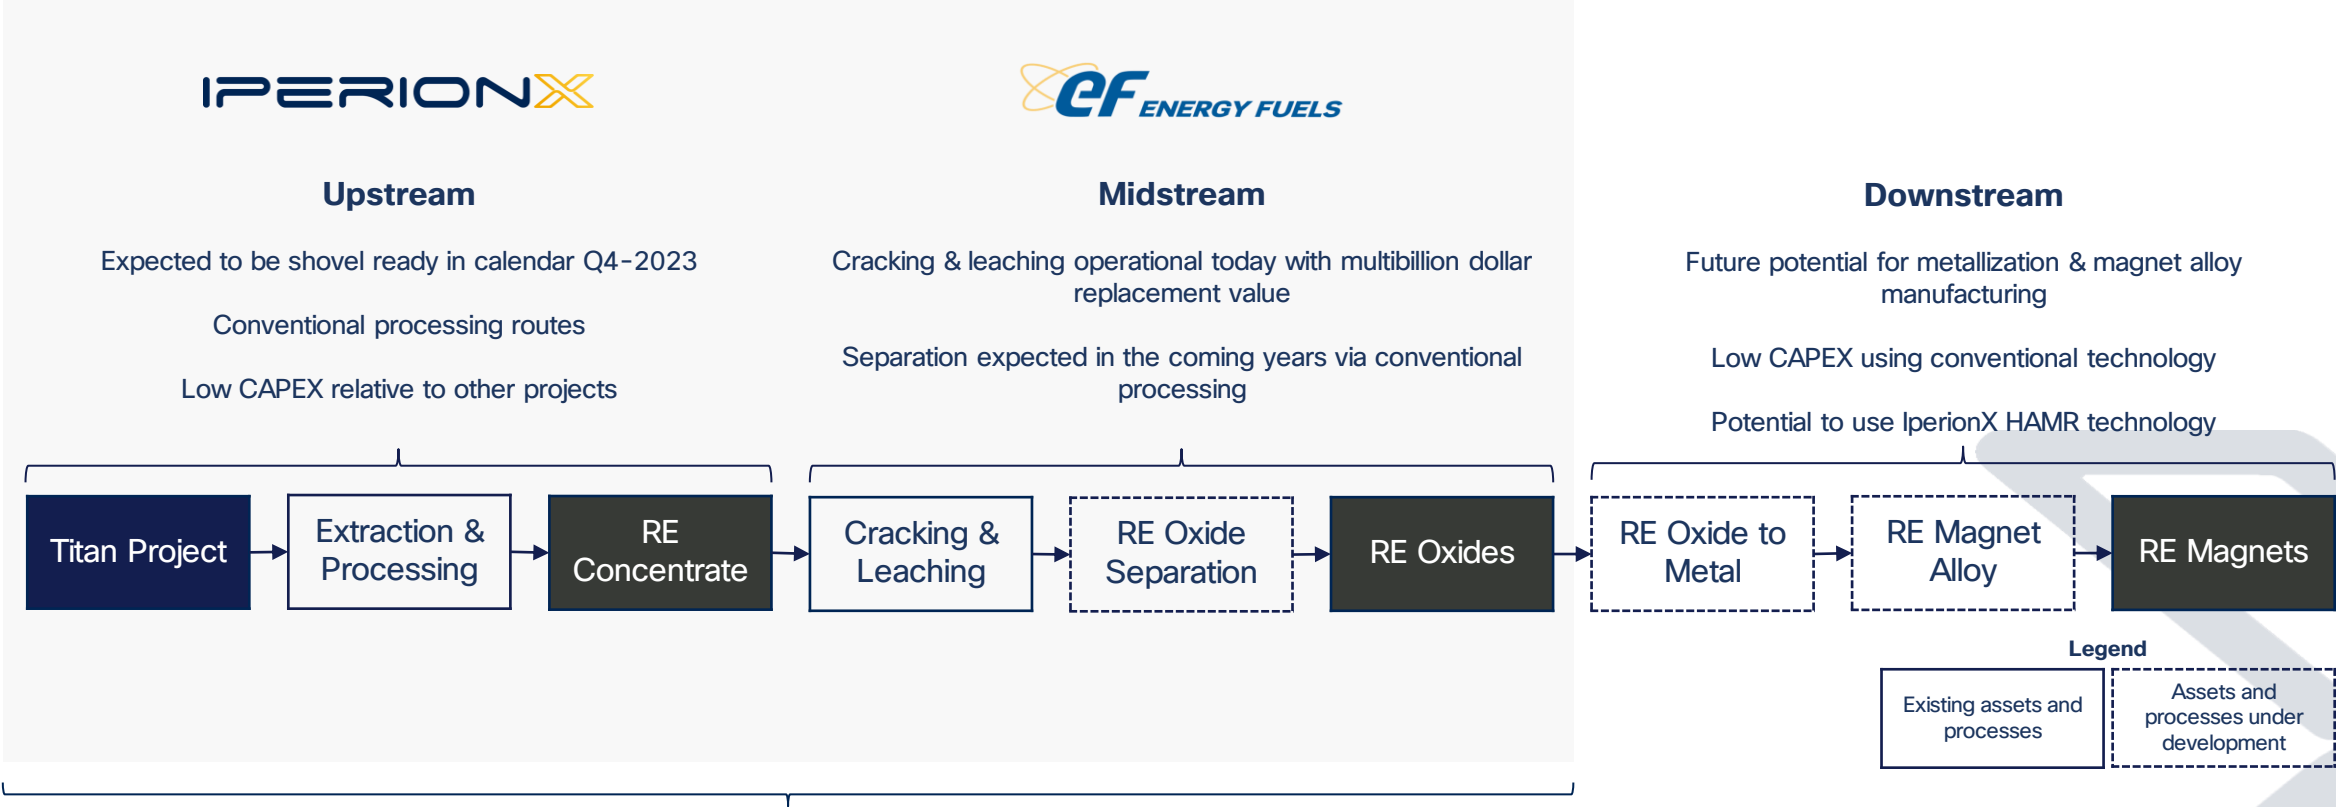

Potential to be a significant source of U.S. heavy rare earth minerals

Source: US Geological Survey, Roskill, WoodMackenzie. Locations shown are approximate.

Minerals from the Titan Project can provide a potential U.S. pathway for domestic rare earth processing

MoU signed between IperionX & Energy Fuels (NYSE: UUUU)¹ for development of the REE supply chain from U.S. mineral to oxides

1. See ASX announcements dated April 22nd, 2021, and update announcement dated March 8th, 2022 for details.

Targeting a shovel ready project for late 2023

- Pre-feasibility study significantly progressed with all test work completed for pre-feasibility process flow sheet development
- Feasibility level bulk sample and first stage separation (removal of <45 micron) material conducted at the Mineral Demonstration Facility and second stage spiral separation having been conducted by Mineral Technologies in Florida
- Heavy mineral concentrate now shipped to Mineral Technologies Australia and expected to be complete with all test work required for engineering study completion by year-end 2022 – typically the long lead time item in any project

IPERIONX

Metal Operations

IperionX vs. Current Industry

The HAMR technology could revolutionize the titanium manufacturing process

The patented metal technologies, centered around Hydrogen Assisted Metallothermic Reduction ("HAMR"), were invented by world-renowned metallurgist, Dr. Zak Fang, Professor of Metallurgical Engineering at the University of Utah. IperionX holds an exclusive option to acquire the HAMR technology and other associated technologies.

- Lower cost
- Reduced energy consumption
- Potential for zero carbon
- 100% recycling potential

We are already producing titanium powder, with near-term plans to expand capacity

Our partner, Blacksand, has a pilot facility operating in Salt Lake City, Utah - built with funding from the U.S. Department of Energy's ARPA-E

- Development of a larger Titanium Demonstration Facility ("TDF") currently underway with targeted production capacity of 125tpa
- The TDF will serve a dual purpose of demonstrating scale while allowing for the commencement of powder production for commercial sales

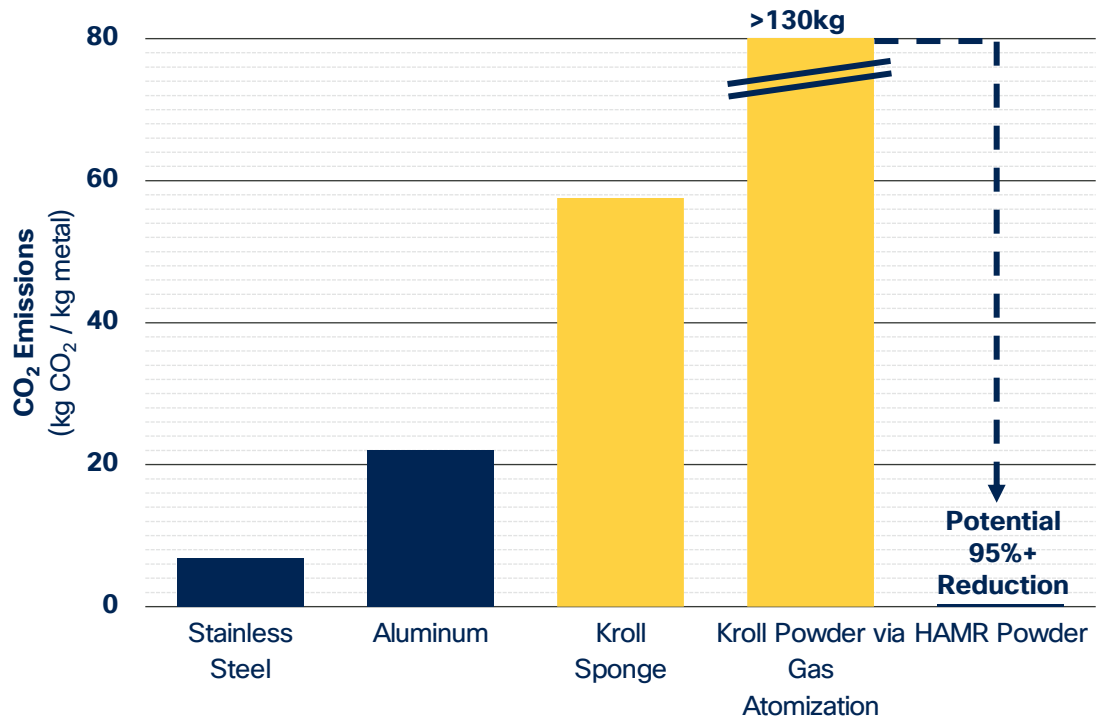

We are also providing powder and parts for customer prototyping

Spherical titanium powders, produced from scrap at our pilot facility, are being 3D-printed into parts and components for customer qualification and testing

And aiming to provide for long term sustainability of supply

Lower Carbon Emissions

100% Recycled Product

Manufacturing of our titanium metal powders today is 100% fed by scrap titanium and in the future we envision an ore-metal supply chain with full recycling of manufacturing scrap and end-of-life products

Source: ARPA-E METALS Program, Feng Gao et al (Journal of Cleaner Production), IperionX Estimates for HAMR. Assumes renewable power sourced for IPX Facility, and 100% scrap feedstock for HAMR spherical powder. Figures shown are targets at 10,000tpa capacity.

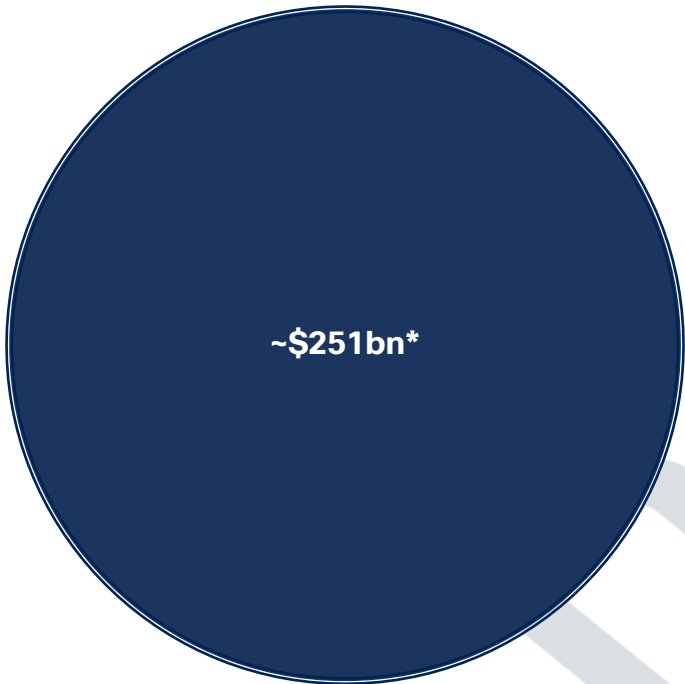

We have potential to disrupt existing stainless steel and aluminum markets

Titanium Market
2019 Ingot Production ~283kt
2019 Av. Price ~\$15,100/t

Aluminum Market
2021 Production ~67Mt
Q1-2022 Price ~\$3,400/t

Stainless Steel Market
2021 Production ~56Mt
Q1-2022 Price ~\$4,450/t

* Estimated Global Market Summary in USD
Sources: Roskill, International Stainless Steel Forum, Jefferies Equity Research, LME, Metal Miner. Pricing as of Q1-2022.

IperionX's vision is to re-shore a U.S. sustainable critical material supply chain – our near-term milestones will help drive our success

A dark, low-key image of an F-35 fighter jet in flight, positioned horizontally across the middle of the slide. The jet is angled slightly upwards and to the right, with its wings and canards visible. The background is a solid dark blue.

Appendix: Additional Information on the Titan Project, Sustainability, Community Engagement, and Government Engagement

Based on the results of our Scoping Study, the Titan Project is a potential multi-decade asset for a long-term, domestic source of rare earths & titanium

- Geological formation targeted is the McNairy Sand, a massive formation extending North-South through west Tennessee
- Projected 25-year initial operational life covers only a small portion of existing landholdings
- Potential for additional resource discovery and conversion within land controlled by IperionX
- Potential for additional land leasing or acquisition could add to further resource conversion

Potential to re-shore the domestic titanium metal industry's feedstock needs

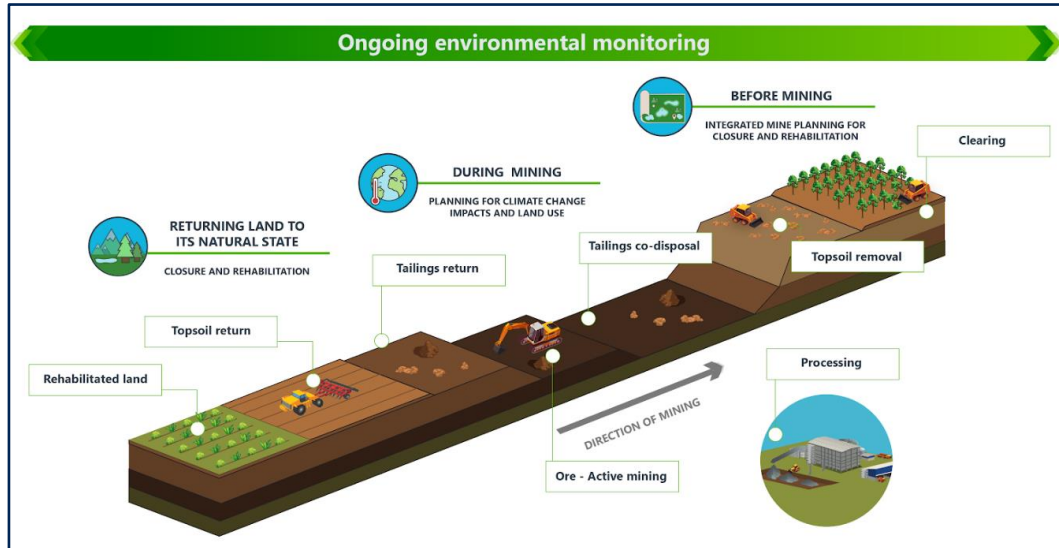

Source: US Geological Survey, Roskill, Titan Project Scoping Study announcement dated June 30, 2022 1. Contained titanium metal based on projected ilmenite and rutile production. Assumes 100% recovery from contained Titanium to Titanium Ingot for illustrative purposes.

While also a major potential source of titanium minerals for the paint & pigment industry

- U.S. paint & pigment industry is 90+% import dependent on titanium minerals
- U.S. domestic consumption of TiO₂ pigment in 2021 was estimated to be ~1.1 million metric tons
- Our Scoping Study demonstrates that the Titan Project could produce ~120ktpa of titanium minerals that can be sold into the paint and pigment industry
- Ukraine was a major source of supply of titanium minerals

Focused on sustainable extraction, processing, reclamation, and rehabilitation

Low carbon impact extraction with active reclamation

- Focusing on zero carbon power (as processing requires mainly electrical power) to limit carbon intensity
- Reclaiming voids actively during extraction meaning only temporary disturbance in any one area at a time

Research into improved rehabilitation programs to return land to a better post operations state

- Native warm season grasses experimental plots for improved rehabilitation
- Experimental plots investigating carbon sequestration opportunities during rehabilitation

We aim to develop one of the most environmentally sustainable mineral operations

- No drilling, blasting or hazardous chemicals used for extraction
- Active reclamation

- Drilling, blasting, grinding and often leaching required
- Process typically results in tailing ponds or piles

**Benton County
Community Q&A**

**Henry County
Fish Fry**

Committed to community engagement & education

- Since the beginning of IperionX, the strategy has been to engage and educate the communities of Benton, Henry & Carroll counties
- IperionX's team on the ground has been extremely active and over the last few years has undertaken many community outreach programs, including:
 - Engagement in all major community fairs and programs
 - Advertising in major community newspapers and local radio stations
 - Presenting to key leaders in the community
 - An open door policy where anyone can ask any question
- Strong community support and relations is a top priority of IperionX

Mineral Demonstration Facility for customer & community engagement

Stage 1 (Operational): Initial hydro-cyclones to remove fine (<45 micron) clays from McNairy Sand ore, successfully used to process feasibility bulk sample

Stage 2 (Targeted Calendar Q3 2022): Addition of spiral circuit to allow for gravity separation of heavy minerals from sand and produce a heavy mineral concentrate

Stage 3 (Targeted Calendar Q4 2022): Pilot scale flotation & electromagnetic equipment to produce samples of REE minerals, Titanium minerals and Zircon concentrate

Federal:
TN Senator Bill Hagerty visit
to IperionX offices in
Tennessee

State:
Speaking to the Tennessee
Agriculture and Natural
Resources committee, and
meeting with Agriculture
Department representatives

Municipal:
Meeting with the Mayor of
McKenzie, TN

Engaging with agencies and representatives across all levels of government

- IperionX is working diligently to develop strong relationships with government stakeholders at the municipal, state, and federal levels
- Focus is on engaging with relevant individuals, committees, and departments who support the re-shoring of critical material supply chains

IperionX is potentially eligible for funding and support from numerous U.S. Government programs

Department of Interior's Critical Minerals Mapping Project

June 21st, 2022

DOI to provide funding to 30 states to support geological mapping efforts to identify critical mineralization deposits

Department of Defense's IBAS Grant to Lynas - \$120m in funding

June 14th, 2022

DOD to provide \$120m in non-dilutive funding to Lynas USA LLC to construct a heavy rare earth separation facility

AM (Additive Manufacturing) Forward Program

May 6th, 2022

Public-Private program with AM industry leaders to provide low-cost financing and technical advice to support small business growth in 3D printing

Securing a Made in America Supply Chain for Critical Materials

February 22nd, 2022

Federal Government to provide major investment funding towards the re-shoring of critical material supply chains to American soil

Department of Energy's Critical Minerals Extraction Facility - \$140m in total funding

February 14th, 2022

DOE funding for a rare earth extraction facility, with funding from the Bipartisan Infrastructure Law

National Science Foundation's SBIR Program - \$110m in total funding

January 11th, 2022

NSF's program to provide non-dilutive, non-interest-bearing funding to promising early-stage R&D start-ups to help commercialize their technology

Department of Energy's ARPA-E SCALEUP Program - \$100m in total funding

December 16th, 2021

DOE program to provide non-dilutive, non-interest-bearing funding to novel pilot-scale technologies to commercialize them

Department of Commerce's Investigation into Neodymium Magnet Imports

September 24th, 2021

Commerce department to investigate the impacts of Neodymium rare earth magnet import reliance on national security

Department of Defense's DPA Grant to Lynas - \$30m in total funding

February 1st, 2021

DOD to provide \$30m in non-dilutive funding to Lynas USA LLC to construct a light rare earth separation facility in Texas
